

In just ten weeks, three developers at Flowmaps completely replaced Van Dorp Energie's software with a significantly improved energy platform using Flux. This upgrade allows new features to be delivered in days instead of months, positioning Van Dorp Energie as a leader in the energy consultancy sector.

1. Client

Van Dorp Energie advises clients on optimizing energy savings, management, and cost. Their core services include invoice auditing and energy procurement, complemented by offerings to reduce energy costs and carbon footprint. The accuracy and reliability of their energy platform are essential for delivering these services effectively.

2. Challenge

Van Dorp Energie's previous software vendor consistently delivered buggy, poorly designed tools, leaving them frustrated and stuck waiting months—or even years—for new features. When those features finally arrived, they were often late and failed to meet expectations, compounding the disappointment.

3. Solution

Van Dorp Energie partnered with Flowmaps to create a new energy platform, with Van Dorp leading the vision and Flowmaps using Flux to build and run the software. This allowed the developers to focus solely on delivering high-quality features at lightning speed without the common technical hurdles that slow things down. Flux, an all-in-one software engine, simplifies coding, testing, and running software, making the entire process fast and predictable.

4. Results

The collaboration between Van Dorp, Flowmaps, and Flux produced exceptional results:

- ☑ **Successful launch:** the new B2B energy platform was built from scratch and went live on the planned date, January 1st, 2024.
- ☑ **Seamless transition:** Existing users logged in on day one with their accounts and data intact.
- ☑ **Efficient development:** The platform was developed by just three developers in 10 weeks.
- ☑ **Massive data handling:** It manages over 10,000 years of energy data connected to 1,800 data sources.
- ☑ **Improved data accuracy:** It automatically detects and corrects data gaps with a scheduled process.
- ☑ **Enhanced user experience:** Users can now view all their data in a single, consolidated page, with options to filter or aggregate instead of only viewing data from individual meters.
- ☑ **Increased customer satisfaction:** The new platform's improvements have led to a 36.4% increase in customer connections within eight months.

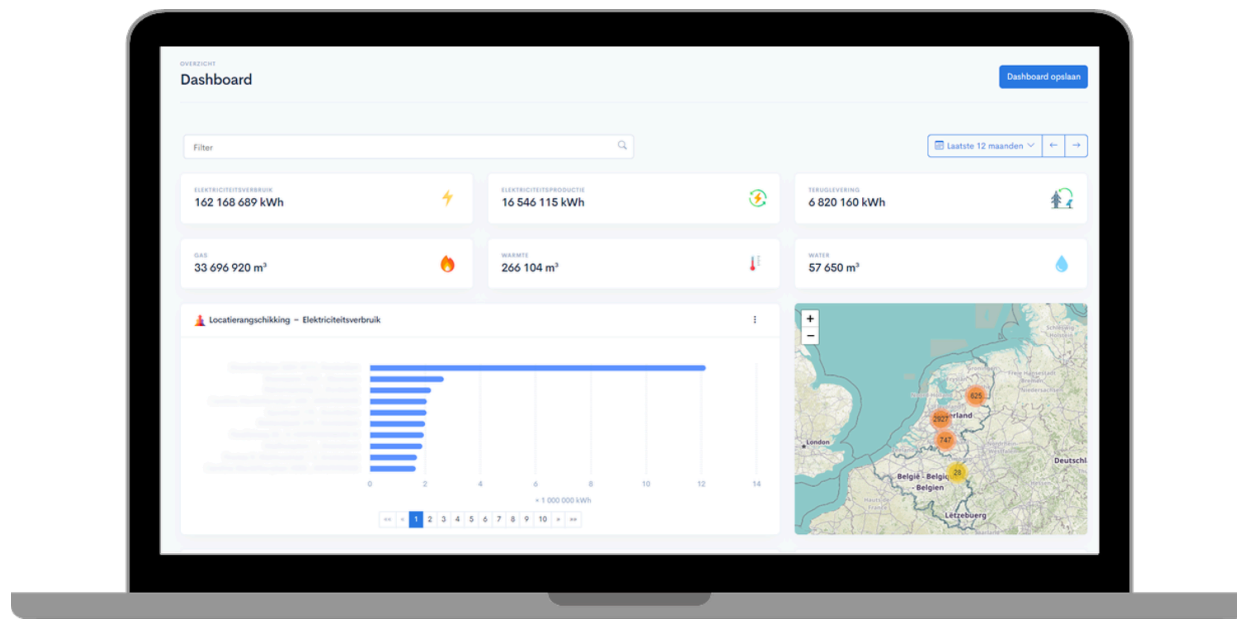

"We were skeptical at first, given our past disappointments with software vendors who promised the world but never delivered. This time was different. Flux turned their promises into reality, and for the first time, we got exactly what we were promised and more."

- Van Dorp Energie

5. Conclusion

Van Dorp Energie is poised to lead the market with its enhanced platform and increased development speed. In just ten weeks, their partnership with Flowmaps and the use of Flux replaced an outdated system with a cutting-edge energy platform. This upgrade boosted customer satisfaction, resulting in a 36.4% increase in new customer connections within eight months, solidifying their position as a top competitor in the energy consultancy sector.
