

MOXI

Mobilität für alle

MOXI, a fast-growing tech startup, rebuilt its platform using Flux in just six weeks. Flux's speed and flexibility allowed MOXI to innovate freely, deliver value faster than ever, and stay ahead of the competition—all while maintaining a small, lean team.

1. Client

MOXI, a startup with global ambitions, is revolutionizing patient transportation by connecting patients, medical institutions, and transport services through an efficient, user-friendly platform. Designed to streamline bookings, MOXI reduces the workload for healthcare staff while ensuring better service for patients with mobility challenges. Their solution promotes smoother, barrier-free transportation, enhancing overall care and operational efficiency across healthcare systems.

2. Challenge

MOXI's reliance on third-party developers created a significant roadblock to their growth. The dependency restricted their ability to make fast, iterative changes and respond to customer needs efficiently. Simple tasks, such as adding new features or custom fields, often became long, drawn-out processes, with responses like "This can't be done" or "It will take weeks." This constant delay limited MOXI's capacity to innovate and scale, frustrating the team and slowing progress.

3. Solution

MOXI needed a fast and flexible solution to regain full control of its technology, and Flux delivered exactly that. By adopting Flux, MOXI could innovate freely, building features without technical constraints. Flux's all-in-one software engine simplifies the entire process—coding, testing, deploying, and running software—making development consistently fast and predictable. Its versatility enabled MOXI to integrate new features, APIs, and legacy systems quickly. Additionally, Flux simplified onboarding for new developers, eliminating steep learning curves and allowing MOXI's small team to stay agile, independent, and productive without needing a large engineering department or external contractors.

4. Results

With Flux, MOXI achieved remarkable results:

- Speed of innovation:** MOXI rebuilt and launched a new version of its platform in just six weeks, dramatically shortening its development time. The newfound freedom allowed them to pivot quickly, build new features, and focus on what mattered: delivering value to their customers.
- Rapid integrations:** MOXI easily integrated with a client's outdated system, which previously took weeks of development. With Flux, they completed the integration in a matter of minutes, impressing both their clients and their team with speed and simplicity.
- Efficiency with a small team:** Despite only having a small team, MOXI outperformed competitors, completing tasks that would typically require much larger teams. They achieved these milestones without sacrificing quality or speed, allowing them to over-deliver on customer expectations.

MOXI

Mobilität für alle

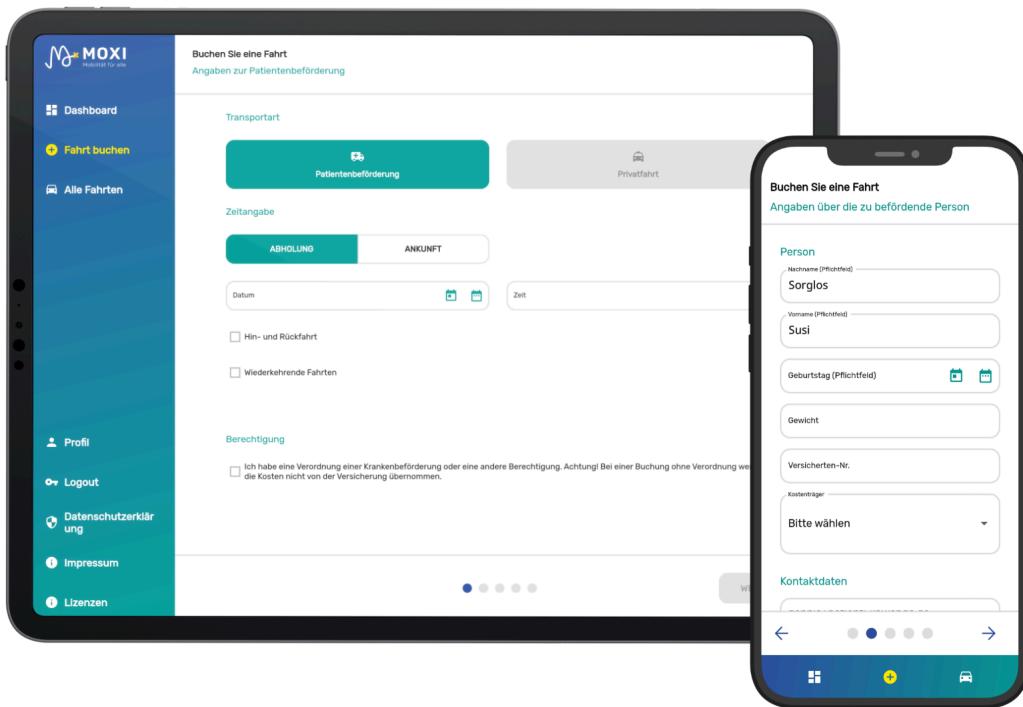

"Flux allows us to build exactly what we want without limits. We've gone from slow and constrained to delivering features at incredible speed. It's been a complete game-changer."

~ Felix Dohmeier, Founder and CEO

5. Conclusion

Flux has been a game-changer for MOXI, helping them overcome significant technical constraints, accelerate their development process, and empower a small team to achieve what typically requires a larger organization. By freeing MOXI from third-party limitations, Flux provided the agility, seamless integrations, and scalability they needed without sacrificing speed or quality. As a result, MOXI is now better equipped to deliver value faster, maintain a competitive edge, and continue expanding its vision for barrier-free mobility.
